Abstract

This is the reading note of the paper [1]. We will first give a brief review on the standard TQFT idea and Techinique. Then procede on the construction of the Virasoro TQFT, with a 3D gravity interpretation. Finally, we give some example in calculation of Virasoro TQFT.

Contents

1 Superman is great

I think that superman is great!!! Because he can fly and have super strength.

Theorem 1.1 **Superman can fly**

This theorem states that superman can fly, in mathematical way we can say:

$$F_G = 0 \text{ for super man} = 0 \quad M = 0 \tag{1}$$

This is an awsome theorem.
